

# Results outline

Christophe Rouleau-Desrochers

January 30, 2026

## Main results

### Wildchrokie

1. None of the four species grew more with more growing degree days (Figure ??)
2. Betpop is the species that grows the most
3. We didn't find strong local adaptation signal across the four sites—they all overlap with 0 (Figure 2)

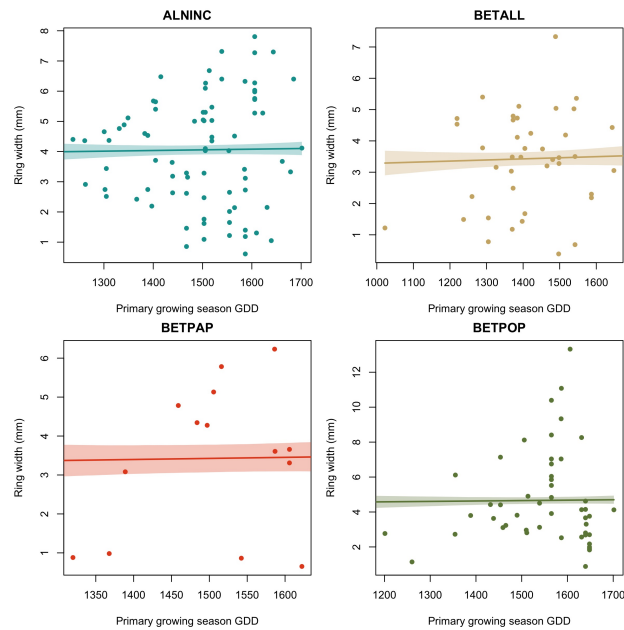

Figure 1: Ring width responses to growing degree days for the primary growing season. The shaded areas represent the 50% confidence intervals.

## Supplemental results

### Wildchrokie

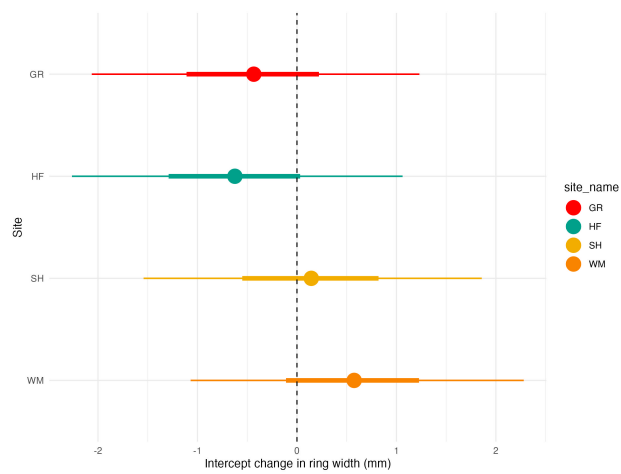

Figure 2: Provenances and stuff
